

The Challenge: Protecting High-Profile Individuals in a Complex World

Executive Protection (EP) teams face an increasingly complex threat landscape. High-profile individuals are exposed to escalating risks from heightened public visibility, online threats translating to physical danger (doxing and stalking), politically motivated extremism targeting leaders, and persistent vulnerabilities at residences and offices. Traditional EP methods relying on human vigilance struggle to maintain 24/7 awareness across multiple locations and sift through the noise of false alarms, often remaining reactive.

Introducing Ambient AI: Proactive Computer Vision Intelligence for EP Teams

Ambient AI provides EP teams and corporate security departments with an advanced, AI-driven security solution, delivering unparalleled situational awareness and proactive threat management for protected locations. By seamlessly integrating with your existing camera and physical access control systems (PACS) at residences, family offices, and corporate headquarters, our platform intelligently identifies and flags potential security incidents in real-time, empowering your team to act decisively before threats escalate.

Elevate Your Principal's Security with Proactive AI. Choose Ambient AI.

Key Benefits for Executive Protection Programs

- **Proactive 'Left-of-Bang' Capability:** Identify precursor activities and potential threats before they escalate, enabling preventative action.
- **Enhanced Vigilance at Fixed Sites:** Provide continuous 24/7 automated monitoring for residences, offices, and other key locations.
- **Reduced False Alarm Fatigue:** Dramatically cut nuisance alerts (>95%), allowing personnel to focus on real threats.
- **Faster Incident Analysis & Response:** Equip teams with verified alerts for rapid response and accelerate post-incident investigations.
- **Optimized Resource Deployment:** Leverage AI as a force multiplier, enhancing the effectiveness of existing personnel and optimizing staffing at fixed locations.
- **Leverage Existing Infrastructure:** Enhance security posture without the immediate need for costly hardware replacement at protected sites.

Tailored Solutions to Executive Protection Security Challenges

Ambient AI's platform is specifically designed to augment EP operations at fixed locations, day or night:

Founder & Managing Partner

In our line of work, being reactive is simply not enough. Ambient AI provides the proactive edge we need... With real-time alerts and unparalleled situational awareness, BlackLab... can identify and mitigate potential risks before they escalate, ensuring the safety of our principals without compromising their freedom.

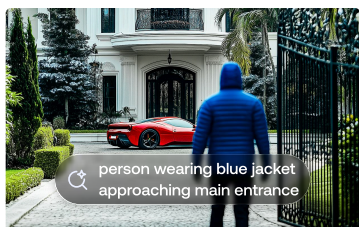

Proactive Threat Detection & Real-Time Response

Ambient AI provides 24/7 monitoring across protected environments, extending vigilance beyond immediate perimeters to critical access points like fence lines and gates. This advanced situational awareness equips executive protection teams with vital early intelligence to observe behaviors and support counterintelligence. Our AI accurately detects unauthorized access, loitering near sensitive zones, fence jumping, and high-severity threats like brandished firearms. Designed for precision, it filters out environmental noise—crucial for EP teams operating without a full SOC—delivering instant, video-verified alerts for genuine incidents and enabling up to 10x faster, more decisive response.

Intelligent Access Control Integration (Signals Intelligence)

Seamlessly connect with your existing PACS (e.g., C•CURE, Genetec, LenelS2, Brivo). Ambient AI uses video verification to automatically validate access events, drastically reducing false alarms (>95%), allowing your team or monitoring center to focus on genuine threats and maintain vigilance without alarm fatigue.

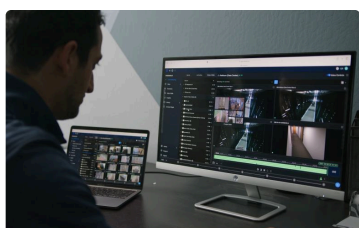

Rapid Incident Investigation (AI-Powered Forensics)

Accelerate investigations of suspicious activity, unauthorized access, or potential threats by 20x. Quickly search across all cameras using simple, contextual queries (e.g., "person loitering near west gate between 2-4 AM," "person wearing blue jacket approaching main entrance") to understand incidents and gather intelligence efficiently.

Insider Threat Indicator Detection

Monitor for anomalous physical behaviors that could indicate insider risk, such as unauthorized access attempts, presence in restricted areas outside normal patterns, or suspicious interaction with sensitive assets. Verified access logs and rapid investigation tools aid in addressing internal risks.

Enhanced Situational Awareness at Protected Sites

Gain a unified, real-time view of security across residences and offices from a centralized platform, acting as a force multiplier for your Executive Protection team.
